About KSOSHTC

Kigali Safety OSH Training Center (KSOSHTC) is a professional training institution based in Kicukiro, Kigali, Rwanda, dedicated to advancing occupational health and safety across all major industrial sectors.

Founded on the principle that every worker deserves to return home safely, KSOSHTC delivers internationally-aligned certification programmes tailored for Rwanda's rapidly growing economy.

Global Relevance: Our curricula align with NEBOSH (UK), IOSH (UK), and OSHA standards — recognised across 130+ countries and mandated by top multinational employers worldwide.

Why OSH Training Matters

Injury Prevention

Properly trained workers identify and eliminate hazards before accidents occur, reducing incident costs by up to 60%.

Legal Compliance

Mandatory OSH compliance under Rwandan labor law and international standards protects both workers and organizations.

Career Advancement

NEBOSH IGC certification opens doors to HSE roles across Africa, the Middle East, and Europe with premium salaries.

Workforce Confidence

Certified teams operate with measurably higher confidence, reducing downtime and improving productivity on-site.

ISO 45001 Alignment

Training programmes are structured to support organisational ISO 45001:2018 OH&SMS implementation from day one.

89%

Average Pass Rate

Our structured approach consistently outperforms industry averages.

Mission, Vision & Values

Our Mission

To deliver high-quality, practically grounded OSH training that develops competent safety professionals, prevents workplace accidents, and promotes a proactive safety culture across Rwandan industry and beyond.

Our Vision

To be East Africa's leading recognised training institution for OSH certification, contributing to national safety infrastructure, providing value through international-standard academic transcripts and measurable quality assurance.

Core Values

Excellence

We hold every training session to international benchmarks. No shortcuts in safety instruction.

Integrity

Transparent assessments, honest grading, and authentic certificate verification for every graduate.

Innovation

Continuously updating syllabi to reflect emerging hazard science and regulatory changes globally.

Inclusivity

Training accessible to all educational levels, from field workers to senior corporate managers.

Impact

Every graduate we produce is one more line of defence between a working person and a serious injury.

Partnership

We build lasting relationships with employers, regulators, and professional bodies across Africa.

Who Should Enrol?

Our OSH Level 3 qualifications are designed for a wide spectrum of professionals — from fresh graduates to senior corporate leaders across all major sectors.

Educational Background	Industry / Field	Current Role	Target Career
Graduate / Diploma / Inter +2	Civil, Mechanical, Electrical, Marine, Mining, Production	Fresh Graduate / Job Seeker	Safety Officer, HSE Supervisor
BSc / BA / BCom / BBA / BCA / B.Ed	Heavy Industry, Oil & Gas, Construction, E&C	Field Technician / Engineer	HSE Engineer, Security Lead, EHS Manager
MCA / MBA / MSc / MA	Corporate Operations, Administration	Manager / Senior Supervisor	Plant Head, Regional HSE Director, Corporate HSE
MBBS / Nursing / Medical Degrees	Healthcare, On-site Clinics, Emergency	Medical Officer / Nurse	Occupational Health Officer, Medical Safety Lead

No Formal Entry Requirement

Anyone can enrol. Our foundational units build knowledge from the ground up.

Flexible Learning Modes

Virtual, in-person classroom, or blended e-learning options available year-round.

Construction

- Working at height
- Scaffolding safety
- Excavation
- Lifting
- confined space entry

Industrial

- LOTO
- Machine guarding
- Hot work
- Pressure systems
- Industrial hygiene

Mining

- Ground stability
- Blasting
- Mine ventilation
- Heavy equipment
- Mine rescue

OSH in Construction

Part 1 of 2

UNIT 1: Foundation

You build thinking first

- Introduction to Occupational Safety & Health (OSH)
- Legal Framework & Safety Regulations (OSHA, ISO 45001, Local Law)
- Roles & Responsibilities in Construction Safety
- Safety Culture & Behavioral-Based Safety (BBS)

UNIT 2: Core Safety Management

Where amateurs fail

- Hazard Identification — HIRA / JSA / JHA
- Hierarchy of Controls (Elimination → PPE)
- Permit to Work Systems (PTW)
- Risk Assessment & Risk Control Measures
- Method Statements & Safe Work Procedures

UNIT 3: High-Risk Construction Activities

Where accidents happen

- Working at Height & Fall Protection Systems
- Scaffolding Safety & Inspection Protocols
- Confined Space Entry Safety
- Excavation & Trenching Safety
- Lifting Operations & Crane Safety

OSH in Construction

Part 2 of 2

UNIT 4: Technical & Site Hazards

Real site problems

- Electrical Safety in Construction
- Fire Safety & Emergency Response on Construction Sites
- Machinery & Equipment Safety
- Chemical Safety & Hazardous Substances (COSHH Basics)

UNIT 5: Control, Monitoring & Improvement

Professionals vs beginners

- Incident Investigation & Reporting Procedures
- Safety Inspections, Audits & Performance Indicators
- Corrective Action Plans & Continuous Improvement

Course Outcomes

Upon completing the OSH in Construction programme, graduates will be able to:

- ✓ Lead site safety briefings and toolbox talks
- ✓ Conduct independent risk assessments
- ✓ Manage permit-to-work systems
- ✓ Investigate incidents using root cause analysis
- ✓ Prepare emergency response plans

Certification: KSOSHTC Certificate of Competency + Academic Transcript with GPA (4.0 scale)

OSH in Industrial

Part 1 of 2

UNIT 1: Foundation

- Introduction to OSH — Industrial
- Context Roles & Responsibilities in Industrial Safety
- Legal Requirements & Compliance (OSHA, ISO 45001)
- Safety Culture & Behavioral-Based Safety (BBS)

UNIT 2: Core Safety Systems

- Hazard Identification — HIRA / JSA / JHA
- Hierarchy of Controls
- Method Statements & Safe Operating Procedures (SOPs)
- Risk Assessment & Control Measures
- Permit to Work Systems (PTW)

UNIT 3: Energy & Machine Control

- Lockout / Tagout (LOTO) — Energy Isolation
- Electrical Safety in Industrial Environments
- Machine Guarding & Equipment Safety
- Pressure Systems & Boiler Safety

UNIT 4: High-Risk Operations

- Confined Space Entry in Industrial Settings
- Working at Height in Industrial Environments
- Hot Work Safety — Welding, Cutting, Grinding
- Lifting Operations & Material Handling

OSH in Industrial

Part 2 of 2

UNIT 5: Chemical & Environmental Control

- Hazardous Substances Management (COSHH)
- Industrial Hygiene — Noise, Dust, Vibration, Fumes
- Fire Safety & Explosion Prevention

UNIT 6: Monitoring, Response & Improvement

- Incident Investigation & Root Cause Analysis
- Post-Incident Analysis & Corrective Action Management
- Safety Inspections, Audits & Incident Investigation in Mining

Industrial Safety Outcomes

- ✓ Apply LOTO procedures on live industrial machinery
- ✓ Manage chemical inventories & COSHH documentation
- ✓ Lead fire emergency drills and evacuation plans
- ✓ Conduct industrial hygiene monitoring
- ✓ Compile audit-ready safety performance reports

6

Core Units

ISO

45001Aligned

OSH in Mining

Part 1 of 2

UNIT 1: Foundation

Understand the system before entering the mine

- Introduction to OSH in the Mining Industry
- Roles & Responsibilities of Mining Safety Personnel
- Mining Laws, Regulations & International Standards

UNIT 2: Core Risk Management

- Hazard Identification in Mining — Surface & Underground
- Risk Assessment & Control Measures in Mining
- Hierarchy of Controls in Mining Operations

UNIT 3: Ground & Structural Safety

- Ground Stability & Rock Fall Protection
- Excavation, Shaft & Tunnel Safety Protocols
- Slope Stability Management (Open Pit Mining)

UNIT 4: Atmosphere & Occupational Health

- Mine Ventilation & Air Quality Control Systems
- Dust Control & Occupational Diseases (Silicosis, etc.)
- Toxic Gases & Chemical Hazards in Mining Environments

OSH in Mining

Part 2 of 2

UNIT 5: Operations & High-Risk Activities

- Heavy Equipment Safety — Dump Trucks, Excavators,
- Blasting & Explosives Safety Management
- Drills Material Handling in Resource Extraction Zones

UNIT 6: Emergency Response & Improvement

- Emergency Response Plans & Mine Rescue Procedures
- Safety Inspections, Audits & Incident Investigation in Mining
- Post-Incident Analysis & Corrective Action Management

Mining Course Outcomes

- ✓ Classify and map underground hazard zones accurately
- ✓ Manage explosive permits and blasting safety plans
- ✓ Establish mine rescue teams and emergency protocols
- ✓ Monitor air quality and ventilation systems
- ✓ Lead slope safety audits on open-pit mining operations

Career Roles After Certification:

Mine Safety Officer · HSE Supervisor (Mining) · Safety Inspector · Mine Rescue Coordinator · Environmental Health Officer

Assessment & Graduate Outcomes

Assessment Structure

Theory (OBE) Open Book
Exam (24 hrs) Pass: 50 / 100

Project Report Practical Risk
Assessment Pass: 60 / 100

Grading: Distinction 80–100 | Merit 60–80 | Pass 55–60

89%

KSOSHTC STANDARD
Continuously outperforming industry averages
through structured mentoring

Safety Officer

Independent field action immediately
upon certification.

Safety Supervisor

Decisive operational oversight on major
construction sites.

HSE Manager

Leading entire safety departments
across enterprise operations.

Our Directorate

Kicukiro, Kigali

Emmanuel NIYOBUHUNGIRO

DIRECTOR — KSOSHTC

Deeply committed to building Rwanda's most competent OSH workforce, Emmanuel leads training delivery, policy development, and international standards alignment across all programmes.
